

## **PITT® Professional Artists' Pastel Pencils**

**PITT® Pastel Pencils** use the same ingredients as Polychromos® Pastels. The difference between the products is that you can create finer details with the pencils. Both ranges match each other perfectly and are great when used together.

PITT® Pastel Pencils, using Faber-Castell®'s secure SV bonding process, have superior pencil strength to other brands. Their unique cellulose binder allows for smooth color lay down and excellent color opacity. PITT® pencils work well with other brands of soft pastels.

Drawings done with pastels must be fixed with a fixative to prevent smudging, otherwise the pigments fall off the paper.

PITT® Professional Artists' Pastel Pencils are available in 60 open stock colors and in 12, 24, 36, and 60 count tin boxes. 35 of the 60 colors are rated with the 3 \*\*\* of light fastness.
