Floaterframe is the only do-it-yourself frame specifically designed for wood panels. Other frames on the market often damage the wood panel, are difficult to attach, and are rarely the correct profile. After years of receiving inquiries from artists struggling with existing frames, Ampersand focused on developing the perfect solution to frame artwork created on a wood cradled panel.

Made with premium hardwood, the quality of floaterframe is immediately evident. Every detail has been designed and engineered to give you a simple, all-in-one framing solution that protects your artwork while giving it the finished look it richly deserves.

- Specifically designed by Ampersand for use with wood panels.
- All of the mounting and hanging hardware is provided to quickly and easily attach your artwork to the floaterframe and hang it. Floaterframes are a complete solution with everything you need in one box!
- A complete framing system to hang flat panels and thin profile artwork included in all ¾” deep frames.
- Available in Maple, Black and White finishes and in two elegant styles: a thin ¼” defined face and a bold ¾” dramatic face.
- Easily accommodates artwork with profiles up to ¾” and 1½”.

WIDER BASE
The expanded frame base allows you to attach the artwork in the center of the panel cradle frame minimizing the damage to your artwork that occurs with conventional frames.

DEEPER RABBET
The deeper rabbet provides the perfect depth to position the face of your artwork just below the frame edge for ¾” and 1½” profile artwork. This protects your artwork while displaying it at its best.

COUNTERSUNK HOLES
Pre-drilled countersunk holes ensure that your artwork attaches easily to the frame and allows it to hang flush against the wall.

BOLD edge  
dramatic elegance

THIN edge  
defined elegance
